

# Global Food Insecurity: A Violation of Human Rights

Approx. time: 65 seconds

## Introduction & The Problem (Rights Focus)

Esteemed Chair, fellow delegates. We convene today to discuss Global Food Insecurity, but we must frame this crisis correctly: it is not merely a humanitarian challenge; it is a profound violation of the **fundamental human right to food**. With nearly 783 million people suffering from hunger today, the time for temporary charity is over—the time for justice and accountability is now.

## Analysis (Systemic Roots)

The **Problem** is not merely a lack of food, but a crisis of systemic injustice. Our **Analysis** reveals that hunger is manufactured by deep, interconnected global systems. These include volatile global commodity markets that prioritize profit over accessibility, chronic underinvestment in localized, smallholder resilience, and the devastating, disproportionate impact of climate change on vulnerable agrarian economies. Conflict and geopolitical instability only compound this systemic failure, repeatedly shattering fragile supply chains.

## Solution (Systemic Change)

Therefore, the **Solution** demands structural, systemic change, not simply reactive aid. We propose three structural pillars: First, mandatory international investment in localized, climate-resilient agricultural infrastructure. Second, comprehensive reform of global trade policies to stabilize food prices and ensure fair market access for developing nations. Third, embedding food security guarantees directly into all conflict resolution and peacekeeping mandates. We must transition from reactive measures to proactive, rights-based resilience.

We urge this body to act decisively: let us uphold the right to food through meaningful, structural, and lasting systemic change. Thank you.
